Gadha K S

Power BI Developer | gadhaks070@gmail.com | +91 8921846793 | Bangalore | LinkedIn

PROFILE

Power BI Developer with 5 years of experience in business intelligence and analytics, primarily in telecom domain. Skilled in Power BI, Advanced SQL, DAX, Microsoft Fabric, ETL (SSIS) and Data Modeling with hands-on experience in end-to-end BI development. Experienced in building scalable dashboards and analyzing large datasets to deliver actionable business insights. Strong focus on performance optimization and business reporting.

SKILLS

Business Intelligence & Reporting: Power BI Desktop & Power BI Service, Power Query (M Language), Data Modeling, Microsoft Excel

Deployment & Infrastructure: Power BI Gateway, Power BI Pro & Premium

Languages: Advanced SQL, DAX (Advanced), Python

ETL: SQL Server Integration Services (SSIS)

Databases & Database Tools: MS SQL Server, Oracle, SQL Server Management Studio (SSMS)

Cloud Platform : Microsoft Fabric, Azure

AI & Productivity Tools: Microsoft Copilot, Generative AI Tools – ChatGPT, Claude (for DAX, SQL & Performance Optimization)

PROFESSIONAL EXPERIENCE

Power BI Developer| Infosys Ltd 11/2021 – Present

- Designed, developed, and deployed **50+ Power BI reports** and **15 executive dashboards** for large-scale telecom operations, giving **100+ users** across leadership and operation teams a reliable view of cost, inventory, and performance **KPIs**, reducing dependence on manual Excel-based reporting.
- Built **Star Schema** data models to handle **300M+ records**, creating well-structured fact and dimension tables that improved query performance and supported scalable reporting.
- Developed and optimized **Power BI Service** solutions using dataflows, incremental refresh, and Premium capacity, ensuring **24/7 report availability** for monitoring over **10,000 assets** valued at **$2.5M** per month.
- Designed data visualizations and Power BI interactive dashboards to analyze telecom data such as circuit lifecycle, network asset performance, forecasting trends, and post-optimization insights, improving operational visibility and enabling faster decision-making.
- Optimized **Advanced DAX** measures and data models to achieve **60–70% faster report performance**, reducing end-user wait time from **2-3 minutes to under 30 seconds**. Used **Microsoft Copilot** to speed up complex DAX development and performance tuning.
- Reduced critical **Advanced SQL** query execution time by **83% (from 1 hour to 12 minutes)** by rewriting complex joins and applying strategic indexing — unblocking 10+ daily Power BI dataset refreshes and consistently meeting SLA commitments.
- Built **Power Query** transformations to clean, standardize, and integrate data from multiple sources, improving data quality and scalability before modeling. Applied query folding techniques to reduce dataset refresh times by **~35%** and improve overall report performance
- Hands-on exposure to **Microsoft Fabric**, including **Data Factory, Lakehouse and Warehouse** with practical understanding of ETL/ELT pipelines, dimensional data modeling and semantic models for modern analytics solutions.
- Developed and maintained **100+ SSIS packages** and enterprise-scale **ETL pipelines** for **data integration** across Oracle, Salesforce, and Excel sources into a centralized **SQL Server Data Warehouse**, improving data accuracy and enabling reliable, high-performance Power BI reporting.
- Configured and managed **Power BI On-premises Data Gateway** to enable secure data integration and scheduled refreshes from Oracle and SQL Server, ensuring consistent data availability and uninterrupted reporting for business-critical dashboards.
- Automated monitoring and alerting for **SSIS ETL jobs** using **SQL Server Agent**, and built Power BI dashboards to troubleshoot, track job status and failures, reducing average ETL failure detection time from 20 minutes to 5 minutes.
- Built **Power BI scorecards and AI-driven visuals** including anomaly detection and smart narratives to track key metrics and surface trends in telecom operations, improving performance visibility and enabling leadership to monitor KPIs and make faster, data-driven decisions.
- Configured **Row-Level Security (RLS)**, workspace governance, **data validation** and data quality frameworks in Power BI Service to enforce role-based access, compliance, and data integrity across **50+** reports serving **100+ users**.
- Implemented **Power BI deployment pipelines** across Dev, Test, and Prod environments, streamlining release cycles, enabling **CI/CD for BI solutions**, reducing manual deployment effort, and improving consistency across reports and datasets.
- Led and mentored a team of **3 BI analysts in an Agile (Scrum)** setup, supporting day-to-day development, reviewing code (DAX, SQL, and data models),tracking tasks using **JIRA**, and ensuring high-quality Power BI delivery across sprint cycles.
- Handled **stakeholder management** across business and operations teams by gathering requirements, clarifying expectations, and translating business needs into Power BI reports and KPIs that supported faster decision-making

EDUCATION

Bachelor of Technology (Industrial Engineering) | A P J Abdul Kalam Technological University| College of Engineering Trivandrum | CGPA: 8.38 | June 2021

CERTIFICATES

- Microsoft Certified Power BI Data Analyst Associate (PL 300)
- Infosys Certified Business Intelligence Associate
- AZ-900: Microsoft Azure Fundamentals

AWARDS

- CMTADM RISE Award – Business Ninja (Individual Category), FY25 – Infosys
